

# INDUSTRIAL CASE STUDY

## WETROOM / UTILITY FLOORING

### SITUATION

Within a newly built extension the customer required a slip-resistant, waterproof floor. The substrate was moisture resistant chipboard which created a floating floor. Traditional materials were not an option as the joints would crack under movement, thus causing leakage.

### SOLUTION

With the room prepared, grey LINE-X XS-100 was sprayed to a minimal thickness of 3mm and a textured finish applied.

### RESULTS

The results were outstanding. The LINE-X will flex and move with the floating floor therefore maintaining the waterproof barrier. The textured finish will ensure the customers grandchildren or dogs do not accidentally slip. The coating will also enable them to hose the floor down should the need arise.

**PROJECT OVERVIEW:** Durable, Water-Resistant Wetroom Flooring

**PRODUCTS USED:** LINE-X XS-100
