

INDUSTRIAL CASE STUDY

RESERVOIR TOP WATERPROOF MEMBRANE - SOUTH WEST WATER

SITUATION

Milber SR is located close to Newton Abbot, Devon. As part of their on-going maintenance and refurbishment policy, South West Water required the 750 m² concrete roof to be sealed to prevent any water and contaminants from penetrating the roof and entering the potable water storage tank below.

SOLUTION

Using specialist spray equipment the WRAS approved XS-350 was applied to the roof area forming a seamless membrane thus preventing any water ingress into the porous concrete slab and offering South West Water the ideal solution.

RESULTS

The WRAS approved XS-350 has a 5 second drying time which allows for large areas to be coated in a relatively short time making it one of the most cost effective solutions with regards to downtime.

PROJECT OVERVIEW: Chemical Resistant Bund Lining

PRODUCTS USED: Wras Approved LINE-X XS-350
